

One program... all inclusive

Out of the box, the software includes support for TFRs, live datalink weather and traffic, GPS, AHRS, airdata, engine data, autopilot output, and much more. Unlike a dedicated handheld GPS, a system based on MountainScope™ is continuously improving with new features and supported devices.

Low cost of ownership

The \$470 activation includes two machines -- a PC and a portable tablet or handheld. Database updates are downloaded via internet, and you don't pay for a subscription -- it costs only **\$15 per download**. If we add more features in the future, the **upgrades are free**.

Grows with your needs and budget

You can start out with a handheld system costing under \$1000. If you later want to upgrade to a system with a bigger screen -- or add weather, traffic, attitude, engine, or auto-pilot capabilities -- all you have to do is get the extra hardware devices.

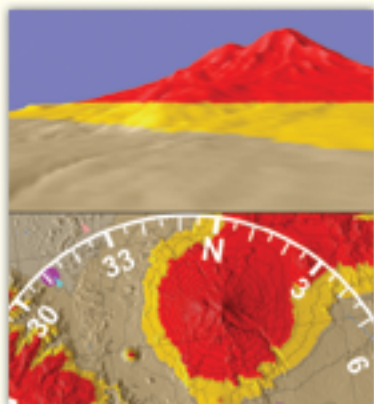

What do I need?

To run the software, all you need is a PocketPC or desktop or portable PC-compatible running Windows 2000, XP, Vista, CE, or Mobile.

Situational Awareness for all the major threats

Terrain
from built-in database

Weather
via live datalink

Traffic
via live datalink or passive detection

... all in the palm of your hand, on your tablet PC, or in your homebuilt panel.

Praise from the industry...

"Stunning. That's the first word that comes to mind when looking at MountainScope's maps. The finely detailed topographic shading makes the maps look more like satellite photos."

*Aviation Consumer
April 2005*

And from our users....

"...the most valuable portable electronic equipment I ever had in a cockpit!"

*Balthasar Indermuehle
Inside Systems GmbH*

"Many things are very simple and user friendly, and clearly were written by a pilot who knew what was needed."

*William Johnson
CFI, Alaskan bush pilot*

"... I feel like I now have Lear Jet avionics in my '63 Cherokee 180. ... Actually - maybe I have better avionics..."

*William Mitchell
Attorney, private pilot*

Aviator's Moving Map Software by

PCAVIONICS™

FLY IT YOUR WAY

PRODUCT FEATURES

- Industry's best terrain depiction with shaded warning areas
